

## CounterCache

SAFETY OUT OF THE BOX

Keep your cash under lock and key and in safe custody at all times

More than 1,000,000 CounterCache units protect cash holdings totalling over 2 billion euros every day.

The CounterCache is available in „Basic“ and „Classic“ versions.

### CounterCache „Basic“

The **CounterCache Basic** is ideal for the retailer who is looking for a cost-effective, secure and efficient solution for the interim security of banknotes. The robust metal housing is connected to the existing cash desk and is released with a key. The box can then be removed for emptying.

### CounterCache Classic

The **CounterCache Classic** is suitable for frequent use. Unlike the CounterCache Basic, it remains permanently in place once installed on the POS system. The cash supplied is secured in an inner cassette. The filled cassette can be easily replaced with an empty cassette using a key. You spend less time at the tills, during shift changes or at the post office. Once stored in the CounterCache Classic box, only authorised personnel can access the cash using a key.

## CounterCache

LESS IS MORE

### Less effort required for skimming

There is no need for the cashier to skim the cash and the cash is in open access for a shorter period of time.

### Less downtime

Internal cash transport is reduced and employees have more time for customers.

### Less shrinkage

Short disclosure of cash and increased internal theft protection.

### > Optimised solution for secure cash storage

### > Compact and robust metal housing

### > Easy integration into existing cash desk

### > Mounted under the cash desk

### > Tamper-proof lock with serial number or barcode (optional)

Seals are available for the CounterCache Classic boxes.

.... which make it impossible to access the money without leaving a trace (only for CounterCache Classic).

**A basis of security**
