

ANKER disinfection pole

FOR MORE HYGIENE AND PROTECTION

Professional protection

Regular hand washing and good hygiene are important to prevent the spread of viruses, bacteria and disease-causing germs. Not only in times of pandemics or during the flu season do pathogens spread mainly through the skin and air. In addition to regular hand washing, disinfectants offer maximum protection. ANKER has developed the disinfection pole so that customers, sales staff, patients and visitors are effectively protected in everyday life.

ANKER offers the solid solution

Based on the ANKER Poles modular system, the disinfection pole is made of a high-quality powder-coated steel tube with Ø 54 mm. ANKER Poles combine flexibility, stability and extreme durability. Thanks to the modular product structure, the pole can be extended with useful, optional accessories such as swivel arms, tablet holders, etc. In combination with a payment terminal, the column can be positioned in front of counters for a hygienic payment process. The supplied arm lever dispenser including an optionally removable plastic drip tray is firmly fixed to the base. The refill container holds up to 1000 ml. All common 500 ml & 1000 ml Euro bottles fit into the dispenser. It is easy to clean. The stroke quantity can be adjusted in 3 steps.

Area of application

Business premises of all kinds, public facilities, at the point of sale in supermarkets, petrol stations and shops of all kinds, washrooms.

Dimensions

Total height incl. disinfectant dispenser 1,300 mm
Arm lever dispenser with 1 litre capacity
